DETAILED ACTION

1. This communication is in response to Remarks/Arguments, filed 07/05/2006 and the Remarks/Arguments, filed 08/05/2006.
2. Claims 1-19 are pending. Claim 1 is independent.

Response to Arguments

3. Applicant's arguments, Remarks/Arguments, filed 07/05/2006, with respect to claims 1-19 have been fully considered and are persuasive. The 102(b) rejections of claims 1-6 and 14-16, and the 103(a) rejections of claims 7 and 9-13 have been withdrawn.

Allowable Subject Matter

4. Claims 1-19 are allowed.
5. The following is an examiner's statement of reasons for allowance:

Claim 1 recites a method of building a database from text, the method comprising the steps of parsing text to identify paths formed by concatenated relationships between words in the text; and generating a database of inference rules comprising pairs of semantically equivalent

paths by associating, in a computer, paths with each other based on a similarity measure between the paths.

Richardson et al. (MindNet: Acquiring and structuring semantic information from text), the closest prior art of record, teach a system for extracting semantic information dealing with relations between words. The relations are used to create paths that connect words within the created rules from a body of text.

The applicant argues that Richardson et al. rules comprising pairs of does not teach: "generating a database of inference semantically equivalent paths by associating, in a other based on a similarity measure between the computer, paths with each Paths". The applicant further argues that Table 3 in MindNet merely lists a series of paths connecting pairs of words and that the focus is on how the words are linked. Thus, MindNet has a number of fixed ways to link words. One link is "Means"; another is "Hypernym". Each word pair linked by one of the fixed links forms a semrel path and a similarity measure between the words at the end of a semrel path is computed. Paths that tend to link the known synonyms in a thesaurus get high weights and paths that tend to link dissimilarity words in the anti-thesaurus get low weights. The path weights are used to compute word similarity. What MindNet cares about is how closely two words are related, so as to decide where in the lexicon they should be placed and what they are related to. Thus, MindNet provides a measure of similarity between two words e.g. pen and pencil, or between car and truck. By comparison, the present invention computes the similarity between paths, not between words. This is illustrated by Table 2 (specification, page 2). In Table 2, two paths are shown. One path is "X finds a solution for Y" and another is "X solves Y". As

Art Unit: 2626

can be seen, the words that can fill in the slots X and Y can be quite different in meaning. In fact, the words filling the slots in two paths can be completely unrelated in meaning as Table 2 shows (e.g. sheriff and committee). This illustrates that what the instant invention cares about is the similarity between paths, not between words. Thus, in the instant invention, a similarity measure is computed to relate the two paths, as for example how similar "X finds a solution for Y" is to "X solves Y" (where X and Y could be any value). It can be seen that the link between X and Y could be any semantic relation, and is not fixed like in MindNet. In fact, the instant invention has to do with discovering the semantic relationships between paths. MindNet, by contrast, has a fixed number of semantic relationships (defined in Table 1 of the MindNet reference).

The examiner agrees with the applicants' arguments that that Richardson et al. rules comprising pairs of does not teach: "generating a database of inference semantically equivalent paths by associating, in a other based on a similarity measure between the computer, paths with each Paths".

Claims 2-19 are also allowed since they depend from claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
